

I can not find my trails from the old platform in the new one.

Your trails created on the classic version of SityTrail have been automatically imported to your account on the new version at a given moment (the last import dates from early January 2019).

However, **the trails created since this date or modified since their import have not been imported/updated yet.**

You must **import / update them manually**. You can do it via the "**Dashboard**" : <https://www.sitytrail.com/fr/users/me/dashboard>
At the very bottom of the screen, you will find "**SityTrail Import**". Click on it, then follow the instructions.

Warning : If you want the selected trails to be updated if they already exist in the Beta version, check the box "**Replace existing trails**" in the 2nd step of the import assistance.

You may also need to remove from the new version trails that you would have deleted in the old version in meantime. Thanks you for your understanding.
