

The application is no longer compatible with my device

Unfortunately, for some technical reasons, this new version is only compatible with the device running **Android 5.0 and higher** and for the iPhones / iPads running **iOS 11 and higher** (which corresponds to the iPhone 5S or the iPas Air minimum).

We apologize.

Unfortunately, we can no longer support versions of Android and iOS older than 5 years, please excuse us.

Feel free to **check** in your device's settings, or with its manufacturer, **that an update is not possible to a newer version of iOS or Android.**

Thanks you for your understanding.
